

Life:WIRE™

...in the palm of your hand

Schooner Healthcare Services

Life:WIRE™, offered by Schooner Health, is THE mobile, interactive solution to help patients manage their health condition in a manner that works with their lifestyle using a patient or individual's cell phone, without the need for costly software, gadgets or training. Life:WIRE's patent pending, industry-leading technology helps build positive health management habits with interactive reinforcement through users' cell phones.

Life:WIRE is a wireless solution for case management, disease management and wellness services. Our text messaging and reminder management system allows individuals or their caregivers to create personal questions and health records to promote a healthier lifestyle. Case managers and physicians can use Life:WIRE to help coordinate their patients' care.

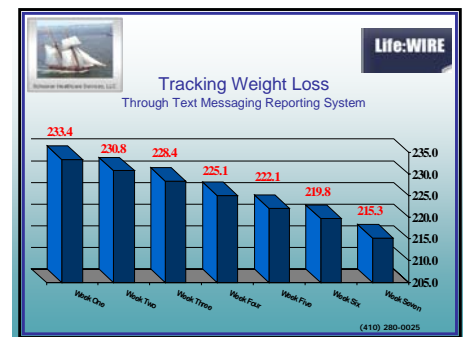

Life:WIRE is a user-friendly and affordable ways for people to proactively manage their disease and health conditions. With Life:WIRE, standard cell phones become an interactive health management tool, without the need for specialized software, downloads or technical expertise. Life:WIRE easily integrates with all population groups and is applicable to any chronic disease or wellness goal.

With Life:WIRE, **Users** can use a web-based interface to:

- Set-up the time, frequency and nature of reminder notifications to be sent to their cell phone for monitoring their condition, medication, appointment or other information;
- Input data;
- Reinforce positive health behaviors;
- View measurement trends (e.g. glucose or blood pressure) through charts and daily records;
- Manage their report history and reminder schedules;
- Review the reminder questions;
- Modify the user information;
- Edit their Min/Max levels and time frame for trend analysis; and
- Change the cell phone used for their Life:WIRE service.

With Life:WIRE **Administrators** can do all the above and more:

- Manage existing user information and activity;
- Analyze user utilization, trends, results, outliers and 'push' messages on an individual or group basis;
- Review time stamps, input, and interactions with the Life:WIRE application;
- Create questions for users;
- Measure compliance with system use;
- Evaluate user specific measurements; and
- Oversee user access (e.g., approval, updates, case closure).
