TCS Healthcare Technologies Celebrates 25th Year of Operations

*Company's Mission Continues to Focus
On Care Management Programs Since TCS' Founding in 1983*

Auburn, California / December 4, 2008. TCS Healthcare Technologies, an industry leader in the development of medical management software applications, announced that it is celebrating its 25th corporate anniversary. With its quarter century of experience and innovation in the medical management arena, TCS continues to demonstrate its leadership in developing and implementing new information technology (IT) solutions to enhance the practice of care management.

Rob Pock, TCS Healthcare Technologies Founder and CEO, notes "TCS Healthcare Technologies was founded in 1983 when case management was beginning to gain popularity. Throughout its tenure as a software leader, TCS has built a loyal community of customers and others, who support TCS' mission."

Pock explains, "TCS has pioneered and led the development of many care management software innovations. For example, acuity advanced care® is recognized by many industry experts as a best-in-class application due to its ability to automate and integrate various medical management programs, including care treatment plans for chronically ill patients."

Mr. Pock and his wife, Esther Pock, started the company with two engineer friends who shared a passion for workplace automation using computer technology. Having worked for Computer Sciences Corporation (CSC) as Manager of New Product Development for its Health Services Division, it was natural for Mr. Pock to focus exclusively on applications that eased the workflow burdens of a fledgling case management industry when he started TCS.

TCS continues to be one of the premier care management software companies in the United States designing, offering and hosting a number of products and services including:

- acuity advanced care, a comprehensive and integrated care management software system for UM, CM and DM services;
- Acuity AnyWare™, a web-enabled case management software application specifically designed for independent professionals or small organizations, which is sponsored by the Case Management Society of America (CMSA);
- AcuCare, evidenced-based medical guidelines which includes health risk assessments and outcome-based care plans;
- AcuSrat™, a population stratification and automation tool that turns patient healthcare information into actionable events;
- AcuExchange™, a provider portal that allows providers to submit authorization requests over the Internet and collaborate with the payer;
- AcuPort™, a middleware software (Extraction, Transformation, & Loading) solution to link disparate information, from multiple applications into one useful system,; and
- Consulting Services for system implementations, workflow process improvement, care planning, and IT integration.

In addition, several new products are under development at TCS.

TCS was originally incorporated as “Trinity Computer Services” but changed its corporate name in 1999 to “TCS Healthcare Technologies.” For more information on TCS, please contact John Sekerak at info@tcshealthcare.com or call (530) 886-1700 ext. 211.
